

Popcorn Machine Kettle Cleaning

Popcorn machine kettles go through some brutal cooking conditions. High temperatures, with oils reaching up to 450 degrees and lots of starches from popcorn kernels. Over time, your kettle can develop an unsightly cooked on carbon buildup that's really tough to clean or remove.

Gold Medal's Heat 'n Kleen popcorn machine kettle cleaner helps to remove this hardened buildup and restore your kettle to its original brightness. Its one of the most popular kettle cleaner products out there.

Mix about 3 to 4 ounces of Heat 'n Kleen with one gallon water thoroughly until it dissolves. You will want to make about a gallon to keep on hand for daily cleanings.

Pour the mixture into your kettle and turn on the kettle heat. Allow to heat for several minutes, then allow to soak and cool completely. Avoid contact with skin. If you choose to scrub, wear latex gloves. After cleaning, dump the kettle into a large bowl, discard the liquid, and dry the kettle.

Daily cleaning and maintenance of your kettle ensures continued profits because your kettle operates more efficiently and lasts longer, protecting your investment. We recommend daily use to keep your kettle sparkling clean! Be sure to always keep on hand in your fun food operation.
